WHERE IT GOES
This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut one 160 mm length of 50 x 50 x 5 angle; deburr.

Upright leg: two 5.5 mm holes 25 mm up from the corner, 25 mm from each end. Drill the box's inner mounting plate through them.

Fit: M5 screws through the inner plate, nuts behind it. The flat leg points out toward the lid, 26 mm above the box floor so the gland nuts below it stay clear. The shelf sits at the left of the box.

Cut two 27 x 4 mm slots in the inner plate, above and below the battery, 37 mm left of centre, for the battery strap.

The battery (151 x 65 x 98 mm, 2.2 kg) stands on the flat leg, its back against the upright leg; the strap goes over and under it.

Check: with the battery strapped, it does not move when the box is tipped.
