WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut one 592 mm length of 40 x 40 x 4 angle; deburr the ends.
One leg stands upright against the lug and the wall bracket; the other lies flat along the top, pointing away from the lug.
Upright leg: four 11 mm holes, 18 mm up from its lower edge:
at the mast end 10 and 37 mm from the end;
at the wall end 13 and 40 mm from the end.
Drill the mast-end pair through the lug together if you can.
Paint cut ends and holes with zinc-rich paint.
Fit: two M10 bolts to the mast lug, two to the wall bracket, nuts on the stay side. Two bolts at each end stop the mast swinging along the wall; the stay is horizontal and square to the wall.
Check: hole pairs 27 mm apart and 552 mm between the pairs.
