WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Blank 430 wide x 367 long from 3 mm 5052 aluminium.
Bend line 165 mm from one end: the short side is the upright leg, the long side (200 mm) carries the panel. Fold to 135 degrees so the legs are 45 degrees apart; a sheet metal shop can do it.
Upright leg: two pairs of 9 mm holes, 42 mm apart across the centre line, 42 and 132 mm below the outside of the bend.
Panel leg: four 5.5 mm holes, 10 mm in from each side edge, 20 and 180 mm from the outside of the bend.
Fit: the upright leg sits on two V-saddles on the outer face of the mast top, held by two U-bolts; the panel's frame lip sits on the panel leg with four M5 bolts, nuts inside the frame.
The panel faces away from the bin, tilted 45 degrees.
