WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Blank 60 wide x 190 long from 3 mm 5052 aluminium.
Bend 90 degrees 60 mm from one end: the short side is the upright leg against the mast, the long side (130 mm) sticks out level.
Upright leg: two 9 mm holes 42 mm apart, 30 mm below the bend.
Level leg: one 12.2 mm hole on the centre line, 112 mm from the outside face of the upright leg, for the antenna's bulkhead.
Fit: on the bin side of the mast, 2.08 m up, on a V-saddle and a U-bolt. The antenna's bulkhead goes through the level leg with its connector underneath; the whip stands up, 140 mm from the mast.
Check: the whip stands upright and clear of the panel frame.
